

Package ‘iai’

February 3, 2021

Type Package

Title Interface to 'Interpretable AI' Modules

Version 1.5.0

Description An interface to the algorithms of 'Interpretable AI' <<https://www.interpretable.ai>> from the R programming language. 'Interpretable AI' provides various modules, including 'Optimal Trees' for classification, regression, prescription and survival analysis, 'Optimal Imputation' for missing data imputation and outlier detection, and 'Optimal Feature Selection' for exact sparse regression. The 'iai' package is an open-source project. The 'Interpretable AI' software modules are proprietary products, but free academic and evaluation licenses are available.

URL <https://www.interpretable.ai>

SystemRequirements Julia (>= 1.0) and Interpretable AI System Image (>= 1.0.0)

License MIT + file LICENSE

Imports JuliaCall (>= 0.17.2), stringr, rlang, lifecycle, rappdirs

RoxygenNote 7.1.1

Suggests testthat, covr, xml2

NeedsCompilation yes

Index **73**

all_treatment_combinations

Return a dataframe containing all treatment combinations of one or more treatment vectors, ready for use as treatment candidates in 'fit_predict' or 'predict'

Description

Julia Equivalent: `IAI.all_treatment_combinations`

Usage

`all_treatment_combinations(...)`

Arguments

... A vector of possible options for each treatment

Examples

```
## Not run: iai::all_treatment_combinations(c(1, 2, 3))
```

apply	<i>Return the leaf index in a tree model into which each point in the features falls</i>
-------	--

Description

Julia Equivalent: [IAI.apply](#)

Usage

```
apply(lnr, X)
```

Arguments

lnr	The learner or grid to query.
X	The features of the data.

Examples

```
## Not run: iai::apply(lnr, X)
```

apply_nodes	<i>Return the indices of the points in the features that fall into each node of a trained tree model</i>
-------------	--

Description

Julia Equivalent: [IAI.apply_nodes](#)

Usage

```
apply_nodes(lnr, X)
```

Arguments

lnr	The learner or grid to query.
X	The features of the data.

Examples

```
## Not run: iai::apply_nodes(lnr, X)
```

as.mixeddata	<i>Convert a vector of values to IAI mixed data format</i>
--------------	--

Description

Julia Equivalent: `IAI.make_mixed_data`

Usage

```
as.mixeddata(values, categorical_levels, ordinal_levels = c())
```

Arguments

`values` The vector of values to convert
`categorical_levels`
 The values in `values` to treat as categoric levels
`ordinal_levels` (optional) The values in `values` to treat as ordinal levels, in the order supplied

Examples

```
df <- iris
set.seed(1)
df$mixed <- rnorm(150)
df$mixed[1:5] <- NA # Insert some missing values
df$mixed[6:10] <- "Not graded"
df$mixed <- iai::as.mixeddata(df$mixed, c("Not graded"))
```

categorical_reward_estimator	<i>Learner for conducting reward estimation with categorical treatments</i>
------------------------------	---

Description

Julia Equivalent: `IAI.CategoricalRewardEstimator`

Usage

```
categorical_reward_estimator(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: lnr <- iai::categorical_reward_estimator()
```

clone	<i>Return an unfitted copy of a learner with the same parameters</i>
-------	--

Description

Julia Equivalent: `IAI.clone`

Usage

```
clone(lnr)
```

Arguments

lnr The learner to copy.

Examples

```
## Not run: new_lnr <- iai::clone(lnr)
```

convert_treatments_to_numeric	<i>Convert 'treatments' from symbol/string format into numeric values.</i>
-------------------------------	--

Description

Julia Equivalent: `IAI.convert_treatments_to_numeric`

Usage

```
convert_treatments_to_numeric(treatments)
```

Arguments

treatments The treatments to convert

Examples

```
## Not run: iai::convert_treatments_to_numeric(c("1", "2", "3"))
```

decision_path	<i>Return a matrix where entry (i, j) is true if the i-th point in the features passes through the j-th node in a trained tree model.</i>
---------------	---

Description

Julia Equivalent: `IAI.decision_path`

Usage

```
decision_path(lnr, X)
```

Arguments

lnr	The learner or grid to query.
X	The features of the data.

Examples

```
## Not run: iai::decision_path(lnr, X)
```

delete_rich_output_param	<i>Delete a global rich output parameter</i>
--------------------------	--

Description

Julia Equivalent: `IAI.delete_rich_output_param!`

Usage

```
delete_rich_output_param(key)
```

Arguments

key	The parameter to delete.
-----	--------------------------

Examples

```
## Not run: iai::delete_rich_output_param("simple_layout")
```

`equal_propensity_estimator`*Learner that estimates equal propensity for all treatments.*

Description

For use with data from randomized experiments where treatments are known to be randomly assigned.

Usage`equal_propensity_estimator(...)`**Arguments**

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Details

Julia Equivalent: `IAI.EqualPropensityEstimator`

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::equal_propensity_estimator()
```

`fit`*Fits a model to the training data*

Description

Julia Equivalent: `IAI.fit!`

Usage`fit(lnr, X, ...)`

Arguments

lnr	The learner or grid to fit.
X	The features of the data.
...	Other parameters, including zero or more target vectors as required by the problem type. Refer to the Julia documentation for available parameters.

Examples

```
X <- iris[, 1:4]
y <- iris$Species
grid <- iai::grid_search(
  iai::optimal_tree_classifier(max_depth = 1),
)
iai::fit(grid, X, y)
```

fit_cv

Fits a grid search to the training data with cross-validation

Description

Julia Equivalent: `IAI.fit_cv!`

Usage

```
fit_cv(grid, X, ...)
```

Arguments

grid	The grid to fit.
X	The features of the data.
...	Other parameters, including zero or more target vectors as required by the problem type. Refer to the Julia documentation for available parameters.

Examples

```
X <- iris[, 1:4]
y <- iris$Species
grid <- iai::grid_search(
  iai::optimal_tree_classifier(max_depth = 1),
)
iai::fit_cv(grid, X, y)
```

fit_predict	<i>Fit a reward estimation model on features, treatments and outcomes and return predicted counterfactual rewards for each observation, as well as the score of the internal outcome estimator.</i>
-------------	---

Description

For categorical treatments, returns the estimated reward under each treatment observed in the data.
 For numeric treatments, returns the estimated reward under each treatment candidate.

Usage

```
fit_predict(lnr, X, treatments, outcomes, ...)
```

Arguments

lnr	The learner or grid to use for estimation
X	The features of the data.
treatments	The treatment applied to each point in the data.
outcomes	The outcome observed for each point in the data.
...	For numeric treatments, the treatment candidates to consider

Details

Julia Equivalent: `IAI.fit_predict!`

Examples

```
## Not run: iai::fit_predict(lnr, X, treatments, outcomes)
```

fit_transform	<i>Fit an imputation model using the given features and impute the missing values in these features</i>
---------------	---

Description

Similar to calling `fit` followed by `transform`

Usage

```
fit_transform(lnr, X, ...)
```

Arguments

lnr	The learner or grid to use for imputation
X	The features of the data.
...	Refer to the Julia documentation for available parameters.

Details

Julia Equivalent: `IAI.fit_transform!`

Examples

```
X <- iris
X[1, 1] <- NA
grid <- iai::grid_search(
  iai::imputation_learner(),
  method = c("opt_knn", "opt_tree"),
)
iai::fit_transform(grid, X)
```

fit_transform_cv	<i>Train a grid using cross-validation with features and impute all missing values in these features</i>
------------------	--

Description

Julia Equivalent: `IAI.fit_transform_cv!`

Usage

```
fit_transform_cv(grid, X, ...)
```

Arguments

grid	The grid to use for imputation
X	The features of the data.
...	Refer to the Julia documentation for available parameters.

Examples

```
X <- iris
X[1, 1] <- NA
grid <- iai::grid_search(
  iai::imputation_learner(),
  method = c("opt_knn", "opt_tree"),
```

```
)  
iai::fit_transform_cv(grid, X)
```

get_best_params *Return the best parameter combination from a grid*

Description

Julia Equivalent: `IAI.get_best_params`

Usage

```
get_best_params(grid)
```

Arguments

grid The grid search to query.

Examples

```
## Not run: iai::get_best_params(grid)
```

get_classification_label
Return the predicted label at a node of a tree

Description

Julia Equivalent: `IAI.get_classification_label`

Usage

```
get_classification_label(lnr, node_index, ...)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.
... Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::get_classification_label(lnr, 1)
```

get_classification_proba

Return the predicted probabilities of class membership at a node of a tree

Description

Julia Equivalent: `IAI.get_classification_proba`

Usage

```
get_classification_proba(lnr, node_index, ...)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.
...	Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::get_classification_proba(lnr, 1)
```

get_depth

Get the depth of a node of a tree

Description

Julia Equivalent: `IAI.get_depth`

Usage

```
get_depth(lnr, node_index)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.

Examples

```
## Not run: iai::get_depth(lnr, 1)
```

get_grid_results	<i>Return a summary of the results from the grid search</i>
------------------	---

Description

This function was deprecated and renamed to [get_grid_result_summary()] in iai 2.1.0. This is for consistency with the IAI v2.2.0 Julia release.

Usage

```
get_grid_results(grid)
```

Arguments

grid	The grid search to query.
------	---------------------------

Examples

```
## Not run: iai::get_grid_results(grid)
```

get_grid_result_details	<i>Return a vector of lists detailing the results of the grid search</i>
-------------------------	--

Description

Julia Equivalent: `IAI.get_grid_result_details`

Usage

```
get_grid_result_details(grid)
```

Arguments

grid	The grid search to query.
------	---------------------------

IAI Compatibility

Requires IAI version 2.2 or higher.

Examples

```
## Not run: iai::get_grid_result_details(grid)
```

```
get_grid_result_summary
```

Return a summary of the results from the grid search

Description

Julia Equivalent: `IAI.get_grid_result_summary`

Usage

```
get_grid_result_summary(grid)
```

Arguments

`grid` The grid search to query.

Examples

```
## Not run: iai::get_grid_result_summary(grid)
```

```
get_learner
```

Return the fitted learner using the best parameter combination from a grid

Description

Julia Equivalent: `IAI.get_learner`

Usage

```
get_learner(grid)
```

Arguments

`grid` The grid to query.

Examples

```
## Not run: lnr <- iai::get_learner(grid)
```

get_lower_child	<i>Get the index of the lower child at a split node of a tree</i>
-----------------	---

Description

Julia Equivalent: `IAI.get_lower_child`

Usage

```
get_lower_child(lnr, node_index)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.

Examples

```
## Not run: iai::get_lower_child(lnr, 1)
```

get_num_fits	<i>Return the number of fits along the path in the trained learner</i>
--------------	--

Description

Julia Equivalent: `IAI.get_num_fits`

Usage

```
get_num_fits(lnr)
```

Arguments

lnr	The GLMNet learner to query.
-----	------------------------------

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::get_num_fits(lnr)
```

get_num_nodes *Return the number of nodes in a trained learner*

Description

Julia Equivalent: `IAI.get_num_nodes`

Usage

```
get_num_nodes(lnr)
```

Arguments

lnr The learner to query.

Examples

```
## Not run: iai::get_num_nodes(lnr)
```

get_num_samples *Get the number of training points contained in a node of a tree*

Description

Julia Equivalent: `IAI.get_num_samples`

Usage

```
get_num_samples(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::get_num_samples(lnr, 1)
```

get_params	<i>Return the value of all parameters on a learner</i>
------------	--

Description

Julia Equivalent: `IAI.get_params`

Usage

```
get_params(lnr)
```

Arguments

lnr The learner to query.

Examples

```
## Not run: iai::get_params(lnr)
```

get_parent	<i>Get the index of the parent node at a node of a tree</i>
------------	---

Description

Julia Equivalent: `IAI.get_parent`

Usage

```
get_parent(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::get_parent(lnr, 2)
```

```
get_policy_treatment_outcome
```

Return the quality of the treatments at a node of a tree

Description

Julia Equivalent: `IAI.get_policy_treatment_outcome`

Usage

```
get_policy_treatment_outcome(lnr, node_index, ...)
```

Arguments

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.
<code>...</code>	Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::get_policy_treatment_outcome(lnr, 1)
```

```
get_policy_treatment_rank
```

Return the treatments ordered from most effective to least effective at a node of a tree

Description

Julia Equivalent: `IAI.get_policy_treatment_rank`

Usage

```
get_policy_treatment_rank(lnr, node_index, ...)
```

Arguments

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.
<code>...</code>	Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::get_policy_treatment_rank(lnr, 1)
```

`get_prediction_constant`

Return the constant term in the prediction in the trained learner

Description

Julia Equivalent: `IAI.get_prediction_constant`

Usage

```
get_prediction_constant(lnr, ...)
```

Arguments

<code>lnr</code>	The learner to query.
<code>...</code>	If a GLMNet learner, the index of the fit in the path to query, defaulting to the best fit if not supplied.

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run: iai::get_prediction_constant(lnr)
```

```
get_prediction_weights
```

Return the weights for numeric and categoric features used for prediction in the trained learner

Description

Julia Equivalent: `IAI.get_prediction_weights`

Usage

```
get_prediction_weights(lnr, ...)
```

Arguments

<code>lnr</code>	The learner to query.
<code>...</code>	If a GLMNet learner, the index of the fit in the path to query, defaulting to the best fit if not supplied.

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run: iai::get_prediction_weights(lnr)
```

```
get_prescription_treatment_rank
```

Return the treatments ordered from most effective to least effective at a node of a tree

Description

Julia Equivalent: `IAI.get_prescription_treatment_rank`

Usage

```
get_prescription_treatment_rank(lnr, node_index, ...)
```

Arguments

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.
<code>...</code>	Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::get_prescription_treatment_rank(lnr, 1)
```

get_regression_constant

Return the constant term in the regression prediction at a node of a tree

Description

Julia Equivalent: `IAI.get_regression_constant` (for regression or prescription tree learners as appropriate)

Usage

```
get_regression_constant(lnr, node_index, ...)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.
...	If a prescription problem, the treatment to query.

Examples

```
## Not run:  
iai::get_regression_constant(lnr, 1)  
iai::get_regression_constant(lnr, 1, "A")  
  
## End(Not run)
```

get_regression_weights

Return the weights for each feature in the regression prediction at a node of a tree

Description

Julia Equivalent: `IAI.get_regression_weights` (for regression or prescription tree learners as appropriate)

Usage

```
get_regression_weights(lnr, node_index, ...)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.
... If a prescription problem, the treatment to query.

Examples

```
## Not run:
iai::get_regression_weights(lnr, 1)
iai::get_regression_weights(lnr, 1, "A")

## End(Not run)
```

```
get_rich_output_params
```

Return the current global rich output parameter settings

Description

Julia Equivalent: `IAI.get_rich_output_params`

Usage

```
get_rich_output_params()
```

Examples

```
## Not run: iai::get_rich_output_params()
```

```
get_roc_curve_data
```

Extract the underlying data from an ROC curve (as returned by [R](https://docs.interpretable.ai/v2.1.0/IAI-R/reference/#iai::roc_curve))

Description

The data is returned as a list with two keys: auc giving the area-under-the-curve, and coords containing a vector of lists representing each point on the curve, each with keys fpr (the false positive rate), tpr (the true positive rate) and threshold (the threshold).

Usage

```
get_roc_curve_data(curve)
```

Arguments

curve The curve to query.

Details

Julia Equivalent: `IAI.get_roc_curve_data`

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::get_roc_curve_data(curve)
```

`get_split_categories` *Return the categoric/ordinal information used in the split at a node of a tree*

Description

Julia Equivalent: `IAI.get_split_categories`

Usage

```
get_split_categories(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::get_split_categories(lnr, 1)
```

get_split_feature *Return the feature used in the split at a node of a tree*

Description

Julia Equivalent: `IAI.get_split_feature`

Usage

```
get_split_feature(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::get_split_feature(lnr, 1)
```

get_split_threshold *Return the threshold used in the split at a node of a tree*

Description

Julia Equivalent: `IAI.get_split_threshold`

Usage

```
get_split_threshold(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::get_split_threshold(lnr, 1)
```

get_split_weights *Return the weights for numeric and categoric features used in the hyperplane split at a node of a tree*

Description

Julia Equivalent: `IAI.get_split_weights`

Usage

```
get_split_weights(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::get_split_weights(lnr, 1)
```

get_survival_curve *Return the survival curve at a node of a tree*

Description

Julia Equivalent: `IAI.get_survival_curve`

Usage

```
get_survival_curve(lnr, node_index, ...)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.
... Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::get_survival_curve(lnr, 1)
```

```
get_survival_curve_data
```

Extract the underlying data from a survival curve (as returned by [R](https://docs.interpretable.ai/v2.1.0/IAI-R/reference/#iai::predict) or [R](https://docs.interpretable.ai/v2.1.0/IAI-R/reference/#iai::get_survival_curve))

Description

The data is returned as a list with two keys: `times` containing the time for each breakpoint on the curve, and `coefs` containing the probability for each breakpoint on the curve.

Usage

```
get_survival_curve_data(curve)
```

Arguments

`curve` The curve to query.

Details

Julia Equivalent: `IAI.get_survival_curve_data`

Examples

```
## Not run: iai::get_survival_curve_data(curve)
```

```
get_survival_expected_time
```

Return the predicted expected survival time at a node of a tree

Description

Julia Equivalent: `IAI.get_survival_expected_time`

Usage

```
get_survival_expected_time(lnr, node_index, ...)
```

Arguments

`lnr` The learner to query.
`node_index` The node in the tree to query.
`...` Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::get_survival_expected_time(lnr, 1)
```

`get_survival_hazard` *Return the predicted hazard ratio at a node of a tree*

Description

Julia Equivalent: `IAI.get_survival_hazard`

Usage

```
get_survival_hazard(lnr, node_index, ...)
```

Arguments

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.
<code>...</code>	Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::get_survival_hazard(lnr, 1)
```

get_upper_child	<i>Get the index of the upper child at a split node of a tree</i>
-----------------	---

Description

Julia Equivalent: `IAI.get_upper_child`

Usage

```
get_upper_child(lnr, node_index)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.

Examples

```
## Not run: iai::get_upper_child(lnr, 1)
```

glmnetcv_regressor	<i>Learner for training GLMNet models for regression problems</i>
--------------------	---

Description

Julia Equivalent: `IAI.GLMNetCVRegressor`

Usage

```
glmnetcv_regressor(...)
```

Arguments

...	Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.
-----	--

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::glmnetcv_regressor()
```

grid_search	<i>Controls grid search over parameter combinations</i>
-------------	---

Description

Julia Equivalent: `IAI.GridSearch`

Usage

```
grid_search(lnr, ...)
```

Arguments

lnr	The learner to use when validating.
...	The parameters to validate over.

Examples

```
grid <- iai::grid_search(  
  iai::optimal_tree_classifier(  
    random_seed = 1,  
  ),  
  max_depth = 1:5,  
)
```

iai_setup	<i>Initialize Julia and the IAI package.</i>
-----------	--

Description

This function is called automatically with default parameters the first time any ‘iai’ function is used in an R session. If custom parameters for Julia setup are required, this function must be called in every R session before calling other ‘iai’ functions.

Usage

```
iai_setup(...)
```

Arguments

...	All parameters are passed through to <code>JuliaCall::julia_setup</code>
-----	--

Examples

```
## Not run: iai::iai_setup()
```

imputation_learner *Generic learner for imputing missing values*

Description

Julia Equivalent: `IAI.ImputationLearner`

Usage

```
imputation_learner(method = "opt_knn", ...)
```

Arguments

method (optional) Specifies the imputation method to use.
 ... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::imputation_learner(method = "opt_tree")
```

impute *Impute missing values using either a specified method or through validation*

Description

Julia Equivalent: `IAI.impute`

Usage

```
impute(X, ...)
```

Arguments

X The dataframe in which to impute missing values.
 ... Refer to the Julia documentation for available parameters.

Examples

```
X <- iris
X[1, 1] <- NA
iai::impute(X)
```

`impute_cv`*Impute missing values using cross validation*

Description

Julia Equivalent: `IAI.impute_cv`

Usage

```
impute_cv(X, ...)
```

Arguments

`X` The dataframe in which to impute missing values.
`...` Refer to the Julia documentation for available parameters.

Examples

```
X <- iris  
X[1, 1] <- NA  
iai::impute_cv(X, list(method = c("opt_knn", "opt_tree")))
```

`install_julia`*Download and install Julia automatically.*

Description

Download and install Julia automatically.

Usage

```
install_julia(prefix = julia_default_install_dir())
```

Arguments

`prefix` The directory where Julia will be installed. Defaults to a location determined by `rapdirs::user_data_dir`.

Examples

```
## Not run: iai::install_julia()
```

`install_system_image` *Download and install the IAI system image automatically.*

Description

Download and install the IAI system image automatically.

Usage

```
install_system_image(
  version = "latest",
  replace_default = F,
  prefix = sysimage_default_install_dir()
)
```

Arguments

<code>version</code>	The version of the IAI system image to install (e.g. "2.1.0"). Defaults to "latest", which will install the most recent release.
<code>replace_default</code>	Whether to replace the default Julia system image with the downloaded IAI system image. Defaults to FALSE.
<code>prefix</code>	The directory where the IAI system image will be installed. Defaults to a location determined by <code>rappdirs::user_data_dir</code> .

Examples

```
## Not run: iai::install_system_image()
```

`is_categoric_split` *Check if a node of a tree applies a categoric split*

Description

Julia Equivalent: `IAI.is_categoric_split`

Usage

```
is_categoric_split(lnr, node_index)
```

Arguments

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.

Examples

```
## Not run: iai::is_categoric_split(lnr, 1)
```

is_hyperplane_split *Check if a node of a tree applies a hyperplane split*

Description

Julia Equivalent: [IAI.is_hyperplane_split](#)

Usage

```
is_hyperplane_split(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::is_hyperplane_split(lnr, 1)
```

is_leaf *Check if a node of a tree is a leaf*

Description

Julia Equivalent: [IAI.is_leaf](#)

Usage

```
is_leaf(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::is_leaf(lnr, 1)
```

`is_mixed_ordinal_split`*Check if a node of a tree applies a mixed ordinal/categoric split*

DescriptionJulia Equivalent: `IAI.is_mixed_ordinal_split`**Usage**`is_mixed_ordinal_split(lnr, node_index)`**Arguments**

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.

Examples

```
## Not run: iai::is_mixed_ordinal_split(lnr, 1)
```

`is_mixed_parallel_split`*Check if a node of a tree applies a mixed parallel/categoric split*

DescriptionJulia Equivalent: `IAI.is_mixed_parallel_split`**Usage**`is_mixed_parallel_split(lnr, node_index)`**Arguments**

<code>lnr</code>	The learner to query.
<code>node_index</code>	The node in the tree to query.

Examples

```
## Not run: iai::is_mixed_parallel_split(lnr, 1)
```

is_ordinal_split *Check if a node of a tree applies a ordinal split*

Description

Julia Equivalent: `IAI.is_ordinal_split`

Usage

```
is_ordinal_split(lnr, node_index)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.

Examples

```
## Not run: iai::is_ordinal_split(lnr, 1)
```

is_parallel_split *Check if a node of a tree applies a parallel split*

Description

Julia Equivalent: `IAI.is_parallel_split`

Usage

```
is_parallel_split(lnr, node_index)
```

Arguments

lnr	The learner to query.
node_index	The node in the tree to query.

Examples

```
## Not run: iai::is_parallel_split(lnr, 1)
```

mean_imputation_learner
Learner for conducting mean imputation

Description

Julia Equivalent: `IAI.MeanImputationLearner`

Usage

```
mean_imputation_learner(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::mean_imputation_learner()
```

missing_goes_lower *Check if points with missing values go to the lower child at a split node of of a tree*

Description

Julia Equivalent: `IAI.missing_goes_lower`

Usage

```
missing_goes_lower(lnr, node_index)
```

Arguments

lnr The learner to query.
node_index The node in the tree to query.

Examples

```
## Not run: iai::missing_goes_lower(lnr, 1)
```

multi_questionnaire	<i>Generic function for constructing an interactive questionnaire using multiple tree learners</i>
---------------------	--

Description

Julia Equivalent: `IAI.MultiQuestionnaire`

Usage

```
multi_questionnaire(obj, ...)
```

Arguments

obj	The object controlling which method is used
...	Arguments depending on the specific method used

multi_questionnaire.default	<i>Construct an interactive questionnaire using multiple tree learners as specified by questions</i>
-----------------------------	--

Description

Julia Equivalent: `IAI.MultiQuestionnaire`

Usage

```
## Default S3 method:  
multi_questionnaire(obj, ...)
```

Arguments

obj	The questions to visualize. Refer to the Julia documentation on multi-learner visualizations for more information.
...	Additional arguments (unused)

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run:
iai::multi_questionnaire(list("Questionnaire for" = list(
  "first learner" = lnr1,
  "second learner" = lnr2
)))

## End(Not run)
```

multi_questionnaire.grid_search

Construct an interactive tree questionnaire using multiple tree learners from the results of a grid search

Description

Julia Equivalent: `IAI.MultiQuestionnaire`

Usage

```
## S3 method for class 'grid_search'
multi_questionnaire(obj, ...)
```

Arguments

obj	The grid to visualize
...	Additional arguments (unused)

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::multi_questionnaire(grid)
```

multi_tree_plot	<i>Generic function for constructing an interactive tree visualization of multiple tree learners</i>
-----------------	--

Description

Julia Equivalent: `IAI.MultiTreePlot`

Usage

```
multi_tree_plot(obj, ...)
```

Arguments

obj	The object controlling which method is used
...	Arguments depending on the specific method used

multi_tree_plot.default	<i>Construct an interactive tree visualization of multiple tree learners as specified by questions</i>
-------------------------	--

Description

Julia Equivalent: `IAI.MultiTreePlot`

Usage

```
## Default S3 method:  
multi_tree_plot(obj, ...)
```

Arguments

obj	The questions to visualize. Refer to the Julia documentation on multi-learner visualizations for more information.
...	Additional arguments (unused)

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run:
iai::multi_tree_plot(list("Visualizing" = list(
  "first learner" = lnr1,
  "second learner" = lnr2
)))

## End(Not run)
```

multi_tree_plot.grid_search

*Construct an interactive tree visualization of multiple tree learners
from the results of a grid search*

Description

Julia Equivalent: [IAI.MultiTreePlot](#)

Usage

```
## S3 method for class 'grid_search'
multi_tree_plot(obj, ...)
```

Arguments

obj	The grid to visualize
...	Additional arguments (unused)

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::multi_tree_plot(grid)
```

`numeric_reward_estimator`*Learner for conducting reward estimation with numeric treatments*

Description

Julia Equivalent: `IAI.NumericRewardEstimator`

Usage

```
numeric_reward_estimator(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::numeric_reward_estimator()
```

`optimal_feature_selection_classifier`*Learner for conducting Optimal Feature Selection on classification problems*

Description

Julia Equivalent: `IAI.OptimalFeatureSelectionClassifier`

Usage

```
optimal_feature_selection_classifier(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run: lnr <- iai::optimal_feature_selection_classifier()
```

```
optimal_feature_selection_regressor
```

Learner for conducting Optimal Feature Selection on regression problems

Description

Julia Equivalent: `IAI.OptimalFeatureSelectionRegressor`

Usage

```
optimal_feature_selection_regressor(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run: lnr <- iai::optimal_feature_selection_regressor()
```

```
optimal_tree_classifier
```

Learner for training Optimal Classification Trees

Description

Julia Equivalent: `IAI.OptimalTreeClassifier`

Usage

```
optimal_tree_classifier(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::optimal_tree_classifier()
```

```
optimal_tree_policy_maximizer
```

Learner for training Optimal Policy Trees where the policy should aim to maximize outcomes

Description

Julia Equivalent: `IAI.OptimalTreePolicyMaximizer`

Usage

```
optimal_tree_policy_maximizer(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: lnr <- iai::optimal_tree_policy_maximizer()
```

```
optimal_tree_policy_minimizer
```

Learner for training Optimal Policy Trees where the policy should aim to minimize outcomes

Description

Julia Equivalent: `IAI.OptimalTreePolicyMinimizer`

Usage

```
optimal_tree_policy_minimizer(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: lnr <- iai::optimal_tree_policy_minimizer()
```

optimal_tree_prescription_maximizer

Learner for training Optimal Prescriptive Trees where the prescriptions should aim to maximize outcomes

Description

Julia Equivalent: `IAI.OptimalTreePrescriptionMaximizer`

Usage

```
optimal_tree_prescription_maximizer(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::optimal_tree_prescription_maximizer()
```

optimal_tree_prescription_minimizer

Learner for training Optimal Prescriptive Trees where the prescriptions should aim to minimize outcomes

Description

Julia Equivalent: `IAI.OptimalTreePrescriptionMinimizer`

Usage

```
optimal_tree_prescription_minimizer(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::optimal_tree_prescription_minimizer()
```

optimal_tree_regressor

Learner for training Optimal Regression Trees

Description

Julia Equivalent: `IAI.OptimalTreeRegressor`

Usage

```
optimal_tree_regressor(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::optimal_tree_regressor()
```

optimal_tree_survival_learner
Learner for training Optimal Survival Trees

Description

Julia Equivalent: [IAI.OptimalTreeSurvivalLearner](#)

Usage

```
optimal_tree_survival_learner(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::optimal_tree_survival_learner()
```

optimal_tree_survivor *Learner for training Optimal Survival Trees*

Description

This function was deprecated and renamed to [optimal_tree_survival_learner\(\)](#) in iai 1.3.0. This is for consistency with the IAI v2.0.0 Julia release.

Usage

```
optimal_tree_survivor(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::optimal_tree_survivor()
```

opt_knn_imputation_learner
Learner for conducting optimal k-NN imputation

Description

Julia Equivalent: `IAI.OptKNNImputationLearner`

Usage

```
opt_knn_imputation_learner(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::opt_knn_imputation_learner()
```

opt_svm_imputation_learner
Learner for conducting optimal SVM imputation

Description

Julia Equivalent: `IAI.OptSVMImputationLearner`

Usage

```
opt_svm_imputation_learner(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::opt_svm_imputation_learner()
```

```
opt_tree_imputation_learner
```

Learner for conducting optimal tree-based imputation

Description

Julia Equivalent: `IAI.OptTreeImputationLearner`

Usage

```
opt_tree_imputation_learner(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::opt_tree_imputation_learner()
```

```
predict
```

Return the predictions made by the model for each point in the features

Description

Julia Equivalent: `IAI.predict`

Usage

```
predict(lnr, X, ...)
```

Arguments

lnr The learner or grid to use for prediction.
X The features of the data.
... Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::predict(lnr, X)
```

predict_expected_survival_time

Return the expected survival time estimate made by a model for each point in the features.

Description

Julia Equivalent: `IAI.predict_expected_survival_time`

Usage

```
predict_expected_survival_time(lnr, X)
```

Arguments

lnr	The learner or grid to use for prediction.
X	The features of the data.

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::predict_expected_survival_time(lnr, X)
```

predict_hazard

Return the fitted hazard coefficient estimate made by a model for each point in the features.

Description

A higher hazard coefficient estimate corresponds to a smaller predicted survival time.

Usage

```
predict_hazard(lnr, X)
```

Arguments

lnr	The learner or grid to use for prediction.
X	The features of the data.

Details

Julia Equivalent: `IAI.predict_hazard`

IAI Compatibility

Requires IAI version 1.2 or higher.

Examples

```
## Not run: iai::predict_hazard(lnr, X)
```

predict_outcomes	<i>Return the predicted outcome for each treatment made by a model for each point in the features</i>
------------------	---

Description

Julia Equivalent: `IAI.predict_outcomes` (for prescription or policy learners as appropriate)

Usage

```
predict_outcomes(lnr, X, ...)
```

Arguments

lnr	The learner or grid to use for prediction.
X	The features of the data.
...	For policy learners only, the reward matrix.

IAI Compatibility

Requires IAI version 2.0 or higher for policy learners.

Examples

```
## Not run: iai::predict_outcomes(lnr, X, ...)
```

predict_proba	<i>Return the probabilities of class membership predicted by a model for each point in the features</i>
---------------	---

Description

Julia Equivalent: `IAI.predict_proba`

Usage

```
predict_proba(lnr, X)
```

Arguments

lnr	The learner or grid to use for prediction.
X	The features of the data.

Examples

```
## Not run: iai::predict_proba(lnr, X)
```

predict_treatment_outcome	<i>Return the estimated quality of each treatment in the trained model of the learner for each point in the features</i>
---------------------------	--

Description

Julia Equivalent: `IAI.predict_treatment_outcome`

Usage

```
predict_treatment_outcome(lnr, X)
```

Arguments

lnr	The learner or grid to use for prediction.
X	The features of the data.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::predict_treatment_outcome(lnr, X)
```

```
predict_treatment_rank
```

Return the treatments in ranked order of effectiveness for each point in the features

Description

Julia Equivalent: `IAI.predict_treatment_rank`

Usage

```
predict_treatment_rank(lnr, X)
```

Arguments

lnr	The learner or grid to use for prediction.
X	The features of the data.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::predict_treatment_rank(lnr, X)
```

```
print_path
```

Print the decision path through the learner for each sample in the features

Description

Julia Equivalent: `IAI.print_path`

Usage

```
print_path(lnr, X, ...)
```

Arguments

lnr	The learner or grid to query.
X	The features of the data.
...	Refer to the Julia documentation for available parameters.

Examples

```
## Not run:  
iai::print_path(lnr, X)  
iai::print_path(lnr, X, 1)  
  
## End(Not run)
```

questionnaire

Specify an interactive questionnaire of a tree learner

Description

Julia Equivalent: [IAI.Questionnaire](#)

Usage

```
questionnaire(lnr, ...)
```

Arguments

lnr The learner to visualize.
... Refer to the [Julia documentation](#) for available parameters.

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run: iai::questionnaire(lnr)
```

random_forest_classifier

Learner for training random forests for classification problems

Description

Julia Equivalent: [IAI.RandomForestClassifier](#)

Usage

```
random_forest_classifier(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::random_forest_classifier()
```

random_forest_regressor

Learner for training random forests for regression problems

Description

Julia Equivalent: `IAI.RandomForestRegressor`

Usage

```
random_forest_regressor(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::random_forest_regressor()
```

rand_imputation_learner
Learner for conducting random imputation

Description

Julia Equivalent: `IAI.RandImputationLearner`

Usage

```
rand_imputation_learner(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::rand_imputation_learner()
```

read_json *Read in a learner or grid saved in JSON format*

Description

Julia Equivalent: `IAI.read_json`

Usage

```
read_json(filename)
```

Arguments

filename The location of the JSON file.

Examples

```
## Not run: obj <- iai::read_json("out.json")
```

reset_display_label	<i>Reset the predicted probability displayed to be that of the predicted label when visualizing a learner</i>
---------------------	---

Description

Julia Equivalent: `IAI.reset_display_label!`

Usage

```
reset_display_label(lnr)
```

Arguments

lnr The learner to modify.

Examples

```
## Not run: iai::reset_display_label(lnr)
```

reward_estimator	<i>Learner for conducting reward estimation with categorical treatments</i>
------------------	---

Description

This function was deprecated and renamed to `categorical_reward_estimator()` in iai 2.0.0. This is for consistency with the IAI v2.1.0 Julia release.

Usage

```
reward_estimator(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::reward_estimator()
```

roc_curve	<i>Generic function for constructing an ROC curve</i>
-----------	---

Description

Julia Equivalent: [IAI.ROCCurve](#)

Usage

```
roc_curve(obj, ...)
```

Arguments

obj	The object controlling which method is used
...	Arguments depending on the specific method used

roc_curve.default	<i>Construct an ROC curve from predicted probabilities and true labels</i>
-------------------	--

Description

Julia Equivalent: [IAI.ROCCurve](#)

Usage

```
## Default S3 method:
roc_curve(obj, y, positive_label = stop("`positive_label` is required"), ...)
```

Arguments

obj	The predicted probabilities for each point in the data.
y	The true labels of the data.
positive_label	The label for which probability is being predicted.
...	Additional arguments (unused)

IAI Compatibility

Requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::roc_curve(probs, y, positive_label=positive_label)
```

```
roc_curve.learner      Construct an ROC curve using a trained model on the given data
```

Description

Julia Equivalent: `IAI.ROCCurve`

Usage

```
## S3 method for class 'learner'
roc_curve(obj, X, y, ...)
```

Arguments

<code>obj</code>	The learner or grid to use for prediction.
<code>X</code>	The features of the data.
<code>y</code>	The labels of the data.
<code>...</code>	Additional arguments (unused)

Examples

```
## Not run: iai::roc_curve(lnr, X, y)
```

```
score      Calculate the score for a model on the given data
```

Description

Julia Equivalent: `IAI.score`

Usage

```
score(lnr, X, ...)
```

Arguments

<code>lnr</code>	The learner or grid to evaluate.
<code>X</code>	The features of the data.
<code>...</code>	Other parameters, including zero or more target vectors as required by the problem type. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::score(lnr, X, y)
```

set_display_label	<i>Show the probability of a specified label when visualizing a learner</i>
-------------------	---

Description

Julia Equivalent: `IAI.set_display_label!`

Usage

```
set_display_label(lnr, display_label)
```

Arguments

lnr The learner to modify.
display_label The label for which to show probabilities.

Examples

```
## Not run: iai::set_display_label(lnr, "A")
```

set_julia_seed	<i>Set the random seed in Julia</i>
----------------	-------------------------------------

Description

Julia Equivalent: `Random.seed!`

Usage

```
set_julia_seed(seed)
```

Arguments

seed The seed to set

Examples

```
## Not run: iai::set_julia_seed(1)
```

set_params *Set all supplied parameters on a learner*

Description

Julia Equivalent: `IAI.set_params!`

Usage

```
set_params(lnr, ...)
```

Arguments

lnr	The learner to modify.
...	The parameters to set on the learner.

Examples

```
## Not run: iai::set_params(lnr, random_seed = 1)
```

set_rich_output_param *Sets a global rich output parameter*

Description

Julia Equivalent: `IAI.set_rich_output_param!`

Usage

```
set_rich_output_param(key, value)
```

Arguments

key	The parameter to set.
value	The value to set

Examples

```
## Not run: iai::set_rich_output_param("simple_layout", TRUE)
```

set_threshold	<i>For a binary classification problem, update the the predicted labels in the leaves of the learner to predict a label only if the predicted probability is at least the specified threshold.</i>
---------------	--

Description

Julia Equivalent: `IAI.set_threshold!`

Usage

```
set_threshold(lnr, label, threshold, ...)
```

Arguments

lnr	The learner to modify.
label	The referenced label.
threshold	The probability threshold above which label will be be predicted.
...	Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::set_threshold(lnr, "A", 0.4)
```

show_in_browser	<i>Show interactive visualization of an object (such as a learner or curve) in the default browser</i>
-----------------	--

Description

Julia Equivalent: `IAI.show_in_browser`

Usage

```
show_in_browser(obj, ...)
```

Arguments

obj	The object to visualize.
...	Refer to the Julia documentation for available parameters.

IAI Compatibility

Showing a grid search requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::show_in_browser(lnr)
```

```
show_questionnaire    Show an interactive questionnaire based on a learner in default browser
```

Description

Julia Equivalent: `IAI.show_questionnaire`

Usage

```
show_questionnaire(lnr, ...)
```

Arguments

`lnr` The learner or grid to visualize.
`...` Refer to the Julia documentation for available parameters.

IAI Compatibility

Showing a grid search requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::show_questionnaire(lnr)
```

```
single_knn_imputation_learner  

   Learner for conducting heuristic k-NN imputation
```

Description

Julia Equivalent: `IAI.SingleKNNImputationLearner`

Usage

```
single_knn_imputation_learner(...)
```

Arguments

`...` Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

Examples

```
## Not run: lnr <- iai::single_knn_imputation_learner()
```

split_data	<i>Split the data into training and test datasets</i>
------------	---

Description

Julia Equivalent: [IAI.split_data](#)

Usage

```
split_data(task, X, ...)
```

Arguments

task	The type of problem.
X	The features of the data.
...	Other parameters, including zero or more target vectors as required by the problem type. Refer to the Julia documentation for available parameters.

Examples

```
X <- iris[, 1:4]
y <- iris$Species
split <- iai::split_data("classification", X, y, train_proportion = 0.75)
train_X <- split$train$X
train_y <- split$train$y
test_X <- split$test$X
test_y <- split$test$y
```

transform	<i>Impute missing values in a dataframe using a fitted imputation model</i>
-----------	---

Description

Julia Equivalent: [IAI.transform](#)

Usage

```
transform(lnr, X)
```

Arguments

lnr	The learner or grid to use for imputation
X	The features of the data.

Examples

```
## Not run: iai::transform(lnr, X)
```

tree_plot	<i>Specify an interactive tree visualization of a tree learner</i>
-----------	--

Description

Julia Equivalent: [IAI.TreePlot](#)

Usage

```
tree_plot(lnr, ...)
```

Arguments

lnr	The learner to visualize.
...	Refer to the Julia documentation on advanced tree visualization for available parameters.

IAI Compatibility

Requires IAI version 1.1 or higher.

Examples

```
## Not run: iai::tree_plot(lnr)
```

variable_importance	<i>Generate a ranking of the variables in the learner according to their importance during training. The results are normalized so that they sum to one.</i>
---------------------	--

Description

Julia Equivalent: `IAI.variable_importance`

Usage

```
variable_importance(lnr)
```

Arguments

lnr The learner to query.

Examples

```
## Not run: iai::variable_importance(lnr)
```

write_booster	<i>Write the internal booster saved in the learner to file</i>
---------------	--

Description

Julia Equivalent: `IAI.write_booster`

Usage

```
write_booster(filename, lnr)
```

Arguments

filename Where to save the output.
lnr The XGBoost learner with the booster to output.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::write_booster(file.path(tempdir(), "out.json"), lnr)
```

write_dot	<i>Output a learner in R format</i>
-----------	--

Description

Julia Equivalent: `IAI.write_dot`

Usage

```
write_dot(filename, lnr, ...)
```

Arguments

filename	Where to save the output.
lnr	The learner to output.
...	Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::write_dot(file.path(tempdir(), "tree.dot"), lnr)
```

write_html	<i>Output a learner as an interactive browser visualization in HTML format</i>
------------	--

Description

Julia Equivalent: `IAI.write_html`

Usage

```
write_html(filename, lnr, ...)
```

Arguments

filename	Where to save the output.
lnr	The learner or grid to output.
...	Refer to the Julia documentation for available parameters.

IAI Compatibility

Outputting a grid search requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::write_html(file.path(tempdir(), "tree.html"), lnr)
```

write_json	<i>Output a learner or grid in JSON format</i>
------------	--

Description

Julia Equivalent: `IAI.write_json`

Usage

```
write_json(filename, obj, ...)
```

Arguments

filename	Where to save the output.
obj	The learner or grid to output.
...	Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::write_json(file.path(tempdir(), "out.json"), obj)
```

write_pdf	<i>Output a learner as a PDF image</i>
-----------	--

Description

Julia Equivalent: `IAI.write_pdf`

Usage

```
write_pdf(filename, lnr, ...)
```

Arguments

filename	Where to save the output.
lnr	The learner to output.
...	Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::write_pdf(file.path(tempdir(), "tree.pdf"), lnr)
```

write_png	<i>Output a learner as a PNG image</i>
-----------	--

Description

Julia Equivalent: `IAI.write_png`

Usage

```
write_png(filename, lnr, ...)
```

Arguments

filename	Where to save the output.
lnr	The learner to output.
...	Refer to the Julia documentation for available parameters.

Examples

```
## Not run: iai::write_png(file.path(tempdir(), "tree.png"), lnr)
```

write_questionnaire	<i>Output a learner as an interactive questionnaire in HTML format</i>
---------------------	--

Description

Julia Equivalent: `IAI.write_questionnaire`

Usage

```
write_questionnaire(filename, lnr, ...)
```

Arguments

filename	Where to save the output.
lnr	The learner or grid to output.
...	Refer to the Julia documentation for available parameters.

IAI Compatibility

Outputting a grid search requires IAI version 2.0 or higher.

Examples

```
## Not run: iai::write_questionnaire(file.path(tempdir(), "questionnaire.html"), lnr)
```

write_svg	<i>Output a learner as a SVG image</i>
-----------	--

Description

Julia Equivalent: `IAI.write_svg`

Usage

```
write_svg(filename, lnr, ...)
```

Arguments

filename	Where to save the output.
lnr	The learner to output.
...	Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: iai::write_svg(file.path(tempdir(), "tree.svg"), lnr)
```

xgboost_classifier *Learner for training XGBoost models for classification problems*

Description

Julia Equivalent: `IAI.XGBoostClassifier`

Usage

```
xgboost_classifier(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::xgboost_classifier()
```

xgboost_regressor *Learner for training XGBoost models for regression problems*

Description

Julia Equivalent: `IAI.XGBoostRegressor`

Usage

```
xgboost_regressor(...)
```

Arguments

... Use keyword arguments to set parameters on the resulting learner. Refer to the Julia documentation for available parameters.

IAI Compatibility

Requires IAI version 2.1 or higher.

Examples

```
## Not run: lnr <- iai::xgboost_regressor()
```
